

Problem: $75 \div 3$

Step 1: Start with a story

Imagine you have 75 candies. You want to share them equally among 3 friends. How many candies will each friend get?

Step 2: Break the number apart

Think of 75 as $70 + 5$.

- First, divide $70 \div 3$.
- Then, divide $5 \div 3$.

Step 3: Do the actual division

1. $70 \div 3 = 23$ with remainder 1, because $3 \times 23 = 69$ and $70 - 69 = 1$.
2. Combine the remainder 1 with the 5 to make 6.
3. $6 \div 3 = 2$.

Step 4: Put it all together

$$23 + 2 = 25$$

Therefore,

$$75 \div 3 = \boxed{25}.$$

Step 5: Explain it simply

First, divide the tens place. Then, bring down what is left and divide the ones place. So $75 \div 3 = 25$.
